

Application Specification:

TG-U95U92-15

Revised: 07/2026

DIVISION 07 01 50.61: GACOFLEX™ GACOBASE U95 & GACOFLEX U92 ROOF COATING FOR TAR AND GRAVEL ROOFING MEMBRANE ASSEMBLIES

PART 1 – GENERAL

1.1 SUMMARY

- A. This specification provides a remedial roof coating for existing tar and gravel built up roofs. Application is restricted to circumstances in which the membrane substrate is in sound condition but requires a renewal of the surface due to the normal effects of aging and use.

When properly applied, GacoBase U95 & GacoFlex U92 Polyurethane Roof Coating provides a weathertight membrane that protects the substrate from degradation caused by ultraviolet light (UV), water, and other normal weathering hazards. The substrate should have at least a 0.25 in (6.4 mm) slope per foot to promote positive drainage.

- B. This specification is intended only as a guide for the development of a project specification. The suitability of this specification for a particular project must be determined by a qualified representative of the owner.

Conditions to check and corrections to consider are:

- The type of pre-existing system must be identified.
- All pre-existing membranes must be fully adhered or mechanically attached and intact.
- The structural decking must be sound.

Elements of this specification may require modification in order to clearly delineate project requirements. Sections that are not pertinent may be deleted.

- C. Adhesion tests are strongly recommended prior to bidding. A Coating Applicator that is licensed by the product manufacturer should perform wet and dry adhesion tests as instructed in GacoFlex General Instructions GW-1-3 Adhesion Testing Procedures using the products listed in Section 2.2.

1.2 RELATED SECTIONS

A. Cast-In-Place Concrete:	Division 03 30 00	F. Vapor /Air Barriers:	Division 07 25 00
B. Flashing/Sheet Metal:	Division 07 60 00	G. Board Insulation:	Division 07 22 00
C. Roof Accessories:	Division 07 72 00	H. Skylights:	Division 08 60 00
D. Rough Carpentry/Wood Blocking:	Division 06 10 00	I. Metal Decking:	Division 05 30 00
E. Drains, Vents and Penetrations:	Division 22 14 26.13		

1.3 SUBMITTALS

- A. **PRODUCT DATA:**
Submit manufacturer's standard submittal package including specification, installation instructions, and general information for each waterproofing material.

B. APPLICATOR QUALIFICATIONS:

Submit current Letter of Good Standing from the specified waterproofing manufacturer.

C. SUBSTRATE CONDITIONS:

1. Applicator to present to owner a completed inspection report verifying substrate condition and any noted defects not specifically addressed in regard to the installation of the coating.
2. Surface shall be free from loose dirt, stone, debris, moisture, and shall be in stable condition. Any work on the area to receive this application shall be completed prior to the installation of the coating.
3. Applicator shall complete a substrate inspection prior to the start of the installation of the coating. The architect/owner and Applicator shall accept the substrate. Start of the work constitutes acceptance.

1.4 QUALIFICATIONS

- A. Primary waterproofing materials shall be the products of a single manufacturer. Secondary materials shall be recommended by the primary manufacturer. The manufacturer shall have a minimum of ten (10) years' experience in the manufacture of materials of this type.
- B. Applicators shall have a minimum of five (5) years' experience in the application of waterproofing materials of the type specified. The Applicator shall possess a current Letter of Good Standing from the specified waterproofing manufacturer.
- C. **PRE-BID CONFERENCE:**
Ten (10) working days prior to the bid opening there is to be a mandatory Pre-Bid Conference. Those not attending the Pre-Bid Conference will not be allowed to bid the project. All products considered an equal to the specified product or any changes in the scope of work, installation, or specifications must be presented at the Pre-Bid Conference. If a change in the specifications is accepted, it will be considered as an alternate and will be presented as a bid addendum issued five (5) working days prior to the bid opening. No other changes to the specification or bid documents will be accepted.
- D. Materials other than those specified shall be submitted to the architect/owner for approval no later than ten (10) days prior to the bid date. In requesting prior approval, it shall be necessary to submit:
 1. A letter of certification, signed by an officer of the manufacturer, stating that the alternate material is equal to or better than the specified product.
 2. Independent laboratory test data giving physical property values in comparison to the specified material.
- E. **PRE-INSTALLATION CONFERENCE:**
Just prior to the commencement of the installation, meet at the job-site with a representative of the coating manufacturer, Applicator, general contractor, architect, and other parties affected by this section. Review the methods and procedures, substrate conditions, scheduling, and safety.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Owner/owner's representative shall reject damaged or non-conforming materials. Rejected materials must be removed immediately from the job site.
- B. Store the coating materials as recommended by the manufacturer and conforming to applicable safety regulatory agencies: town or city, state, and federal. Refer to all applicable data including, but not limited to: Safety Data Sheets, Product Data Sheets, product labels, and specific instructions for personal protection.
- C. Provide adequate ventilation, protection from hazardous fumes, and overspray potential to workers and associated trades in close proximity of the site application.

1.6 WARRANTY

- A. Manufacturer warrants that the material supplied will meet or exceed physical properties as published. The Applicator guarantees that workmanship will be free of defects in coating application. Since performance of previously applied coatings is beyond the control of Manufacturer and Applicator, requests for additional warranty coverage shall be subject to prior approval by Manufacturer.
- B. **A FIFTEEN (15) YEAR LABOR AND MATERIAL WARRANTY MUST BE OBTAINED THROUGH THE MANUFACTURE.**

C. PROTECTION OF BUILDING AND OCCUPANTS:

1. All surfaces not to receive the coating specified shall be protected from overspray hazard, e.g., windows, doors, exterior surfaces and facades, parking lots, and vehicles. Protective coverings shall be secured against wind and shall be vented if used in conjunction with applications preventing collection and moisture.
2. Applicator to post signs noting potential overspray hazard within 400 ft (121.90 m) of applications.
3. All air intake ventilation equipment shall be turned off to prevent fumes from entering building.
4. Surfaces damaged during application shall be restored at no expense to the owner.
5. No smoking signs to be posted as mandated by local fire officials.

D. SUBSTRATE:

Proceed with work as specified only after substrate construction, preparation, and detail work has been completed.

E. EQUIPMENT:

All equipment used during operations shall be located so as not to adversely affect the daily operations or endanger occupants, structure, or materials on-site. All spray equipment must be grounded during operations.

PART 2 – PRODUCTS**2.1 MANUFACTURERS****ACCEPTABLE MANUFACTURERS:**

Gaco, www.gaco.com – Manufactured by Amrize Building Envelope LLC.
Other brands manufactured by Amrize building Envelope LLC as noted.

2.2 MATERIALS**A. PRIMER:**

GacoFlex E5320 2-Part Epoxy Primer/Filler (as needed)

B. FLASHING:

- 1.) GacoFlex 66S Reinforcing Polyester Mesh
- 2.) GacoFlex UF9022 – GacoMastic™
- 3.) GacoFlex H.E.R.

C. POLYURETHANE BASE COATING:

GacoBase U95 Two-Component Urethane Base Coating has the following physical properties:

GacoBase U95 Two-Component Urethane Base Coating		
PROPERTY	VALUE	
TENSILE STRENGTH - INITIAL	ASTM D2370 550psi (3.8 MPa)	
TEAR RESISTANCE	ASTM D624	150 lb / in (68 kg / 25 mm)
SOLIDS CONTENT	Weight: 100 % Volume: 100 %	ASTM D1644 ASTM D2697
VOC	< 50 g / L	EPA Method 24
TEAR RESISTANCE (DIE C)	ASTM D624	150 lb / in (68 kg / 25 mm)
WATER VAPOR PERMEABILITY – 20 MILS DFT (INCH POUNDS)	ASTM E96	0.5 Perms

D. POLYURETHANE TOP COATING:

GacoFlex U92 Polyurethane Roof Coating has the following physical properties:

GacoFlex U92 - WHITE Single Component Moisture Cure Aliphatic Topcoat		
PROPERTY	VALUE	TEST METHOD
TENSILE STRENGTH INITIAL	910 psi (6.27 MPa)	ASTM D2370
ELONGATION INITIAL	627 %	ASTM D2370
SOLIDS CONTENT	82 % (By Weight) 77 % (By Volume)	ASTM D1644 ASTM D2697
VOC	< 50 g/L (< 0.417 lb/gal)	EPA Method 24
SOLAR REFLECTANCE	Initial: 0.85 After Soiling: 0.73	ASTM C1549 U92 White
WATER VAPOR PERMEABILITY (20 MILS)	6.0 Perms	ASTM E96-B

PART 3 – EXECUTION

3.1 EXAMINATION

- A. A moisture survey is strongly recommended to identify wet roofing materials. Any wet roofing materials must be removed and replaced.
- B. Repair to the structural components of the roof should be completed.
- C. Verify that the drains, vents, ducts, gutters, metal cap flashing, or other penetrations have been replaced or modified.

3.2 PREPARATION

NOTE: It is extremely important for the roof to be clean and dry.

- A. **AGGREGATE REMOVAL:** Remove loose aggregate using vacuum method or by power broom. The roof surface must be clean and completely dry, especially in areas of ponding water.
- B. **RINSING:** Use a commercial power washer >3,000 psi (>21 MPa) to remove debris and continue rinsing until water is clear. Start at the highest point of the roof and work towards the lowest point. For low-sloped roofs, work away from and then back towards roof drains. It is important to keep the surface wet until all residue has been completely rinsed off and the surface is clean. After cleaning and rinsing the roof, ensure no dirt or debris is present.
- C. **BIOLOGICAL CONTROL:** Areas of algae, mildew or fungus on the roofing membrane should be treated with a solution of 1-part household bleach to 3 parts water, followed by a power washer rinse using clear water. After cleaning, examine the application area to determine that no ponding or standing water remains before applying the coating.

3.3 PREPARATION

A. TECHNICAL ADVICE:

The installation of this system shall be accomplished with the advice of, the manufacturer's technical representative. Contact Technical Services for assistance.

B. REPAIRS:

- 1. Inspect the roofing system for open field seams, open side laps, open flashings, or voids. Fish mouths should be cut and allowed to lie flat prior to repair. Repair with appropriate compatible materials.
- 2. Areas of delaminated, warped, bowed, or saturated insulation must be removed down to the structural decking, replaced with compatible materials, and appropriately attached.
- 3. Repair or replace defective edge attachments or base tie-ins and wall or penetration

flashings.

4. Remove defective pitch pan filler, metal flashing sealants or termination caulking and replace with appropriate compatible materials.

NOTE: Only torch-applied or heat fused granule surfaced APP membrane may be used for repairs to the asphalt roofing substrate prior to the installation of GacoFlex Polyurethane Roof Coating, regardless of the existing asphalt membrane type. Do not use SBS, smooth APP or self-adhering membranes. Do not use asphalt mastics or cold adhesives as part of remedial roof repairs.

C. PRIMER:

For non-asphalt surfaces i.e. (Metals) if adhesion testing indicates the need for a primer, apply GacoFlex E5320 2-Part Epoxy Primer/Filler at an approximate rate of 1 gal / 300 ft² (3.78 L / 23.2 m²) to produce a minimum Dry Film Thickness (DFT) of 2-3 mils. Do not over-apply. When properly mixed and applied, E5320 Primer should remain a translucent pink color in its cured state. Spray application of E5320 Primer is preferred to achieve the required coverage rate, roller application using a ¼ in (6.4 mm) to ⅝ in (9.5 mm) nap roller or nylon brush is permitted. Allow E5320 Primer to cure for a minimum of six (6) hours (longer in overcast or humid conditions) before continuing to the next step of the application process.

NOTE: For granular or rough surfaces, more material may be needed to achieve the required minimum mil thicknesses. Application below required minimum mil thickness will cause adhesion failure and result in non-warrantable damage/failure of the application.

D. AT ALL FLASHING SEAMS, CORNERS AND LAPS, CHOOSE ONE OF THE FOLLOWING:

1. Apply GacoBase U95 by brush or roller at a minimum width of 6 in (152 mm) centered on the seam at minimum rate of 1.5 gal / 100 ft² (5.7 L / 9.3 m²) to obtain a Wet Film Thickness (WFT) of 24 mils (approx. 200 LF / gal (61 LM / 3.8 L). Immediately embed a 4 in (102 mm) strip of GacoFlex 66S into the wet coating and ensure it is fully embedded into the coating. GacoFlex 66S must be smoothly applied without wrinkles, "fish mouths," blisters, or pin holes. Once the GacoBase U95 with embedded GacoFlex 66S firm to the touch, apply another coat of GacoBase U95 at a minimum rate of 1.5 gal / 100 ft² (5.7 L / 9.3 m²) and ensure complete encapsulation of the tape. Allow to dry for a minimum of one (1) – two (2) hours (at 75 °F (24 °C) and 50 % RH) before proceeding to the next step of installation.
2. Apply GacoFlex UF9022 – GacoMastic at the approximate rate of 70 LF / gal and 4 in (102 mm) wide, crested and centered at the seam. Achieve an average minimum WFT of 64 mils when measured at center at all areas to receive flashing. Allow to dry a minimum of forty (40) hours at 75 °F (24 °C) and 55 % R.H. to achieve full cure. Low humidity and low temperature will result in longer cure times.
3. Apply GacoFlex H.E.R. Sealant at the approximate rate of 70 LF / gal and 4 in (102 mm) wide, crested and centered at the seam. Achieve an average minimum WFT of 64 mils when measured at center at all areas to receive flashing. Allow to dry a minimum of twelve (12) to twenty-four (24) hours at 75 °F (23.9 °C) and 45 % R.H. Weather-related conditions such as frost, dew, mist, condensation, humidity, and temperature must be taken into consideration prior to coating. Temperature should be above 40 °F (4.45 °C) more than 5 °F (2.8 °C) above the dew point and rising, for best application results.

NOTE: Refer to manufacturer's product instructions and/or data sheet for important information regarding drying times and other important factors to consider regarding application.

E. HVAC / ELECTRICAL:

Existing HVAC Units and other equipment on curbs with a membrane flashing: The membrane flashing must be coated up to the bottom of the metal cap of the unit and sealed underneath with a sealant of approved & appropriate type. Curbs must be a minimum of 8 in (203 mm) above the roofing membrane.

F. SLEEPERS:

Any units that are sitting on sleepers must be lifted so that the membrane underneath the units can be cleaned, primed, and coated. An approved slip sheet must be placed under the sleepers to protect the coating. If the units are not lifted off the deck so as to be able to accomplish this procedure, the untreated area will be excluded from the manufacturer's warranty.

G. APPLICATION GACOBASE (T&G) ROOFS:

After the substrate has been prepared, aggregate has been removed, the roof substrate has been rinsed, and the substrate is dry, apply GacoBase U95 at the average rate of 3.0 – 6.0 gal / 100 ft² (11.4 – 22.7 L / 9.25 m²). Ensure that GacoBase U95 fully encapsulates at least 75 % of the remaining embedded aggregate and/or no more than ¼" of aggregate showing. All protruding aggregate must be fully coated with GacoBase U95.

Allow to dry for a minimum of four (4) hours at 75 °F (24 °C) and 50 % RH before proceeding to the next step of installation.

NOTE: More material may be needed to achieve the required minimum mil thicknesses.

H. POLYURETHANE TOP COATING:

FIRST TOPCOAT: Apply one (1) coat of GacoFlex U92 at the average rate of 1.0 gal / 100 ft² (3.8 L / 9.3 m²) to obtain the required minimum 16 mil Wet Film Thickness (WFT) / 12 mil Dry Film Thickness (DFT).

NOTE: Allow to dry for ten (10) – twelve (12) hours at 75 °F (24 °C) and 50 % RH. Dry time will be faster in warmer and more humid conditions, and slower in colder and dryer conditions.

Allow to cure for a minimum of twenty-four (24) (depending on temperature and humidity)

SECOND TOPCOAT: Apply one (1) coat of GacoFlex U92 at the average rate of 1.0 gal / 100 ft² (3.8 L / 9.3m²) to obtain the required minimum 16 mil Wet Film Thickness (WFT) / 12 mil Dry Film Thickness (DFT).

NOTE: Some surfaces may require more material to achieve the required minimum mil thicknesses. Application below required minimum mill thickness will cause adhesion failure and result in non-warrantable damage/failure of the application.

I. GRANULAR COAT (OPTIONAL):

An additional granular coat may be added. Apply one coat of GacoFlex U92 Polyurethane Topcoat at a minimum of 0.5 gal / 100 ft² (1.9 L / 9.25 m²) for 8 mils WFT. Immediately broadcast white roofing granules into finish coat at the rate of 30 lb / 100 ft² (13.6 kg / 9.25 m²).

J. WALK PAD (OPTIONAL):

Apply one coat of GacoFlex U92 Polyurethane Topcoat a rate of 1 gal / 100 ft² (3.78 L / 9.25 m²) to obtain a minimum of 16 mil Wet Film Thickness (WFT). Immediately broadcast roofing granules into finish coat at the rate of 30 lb / 100 ft² (13.6 kg / 9.25 m²).

NOTE: Tape off walk pad area using preferred masking tape. Remove tape while coating is still wet.

CAUTION: *While the use of granules will improve traction, caution should still be exercised when walking on the coated roofing system, especially in wet conditions.*

3.4 FIELD QUALITY CONTROL

- A. Any variations from the specified limits found by the Applicator or owner's representative shall be corrected by the Applicator.

B. **MINIMUM DRY FILM THICKNESS (DFT) REQUIREMENT:**

Gaco recommends adding a 10% variance factor to meet the minimum Dry Film Thickness (DFT) mil requirement to qualify as a warrantable application. It is the Applicator's responsibility to calculate the amount of coating needed to obtain the minimum Dry Film Thickness (DFT) mil thickness.

- C. No traffic shall be permitted on the coated surface for a minimum of three (3) days. Damage to the surface by other trades shall not be the responsibility of the Applicator.
